

FACILITIES MANAGEMENT ADVISORY

DATE: August 20, 2024
RE: CAMPUS WATER PRESSURE

Dear Campus Community,

This morning there was an electrical component failure at the Pump House impacting the campus water system. As a result, there was an unplanned outage to the water system. The unplanned outage lasted approximately 20 minutes. During that time, water pressure across campus was significantly diminished from normal pressure. Facilities Management technicians remedied the issue, and the water system is now operational. Repairs of the failed component are being scheduled.

Facilities technicians are currently checking the building and the water systems throughout campus.

We apologize for the inconvenience.

If you have any questions, or concerns or require service, please contact Facilities Management.
